Transition to Government Framework
A framework for assessing readiness to transition health solutions to government ownership

**CONTEXT:** (not specific to a given solution)
- The global, regional and country environment; economic capacity and political will to absorb and support needed health-related capabilities

**INTEGRATED SOLUTION ELEMENTS:** (specific to a given solution)
- **SOLUTION DESIGN**
  - A proven solution including the standard operating procedures, guidelines, tools, templates, job and skill descriptions, needed to manage and operate the solution
- **RESOURCE AVAILABILITY**
  - Financial, human resources and infrastructure such as buildings and equipment needed to transition, operate and maintain a solution
- **FINANCIAL MANAGEMENT**
  - The government capacity to develop and manage budgets, and estimate and manage costs; capacity to disburse funds in a timely fashion
- **GOVERNMENT STRATEGY**
  - Health sector and related strategies that support solution transition, operation and maintenance
- **POLICY & REGULATION**
  - Laws and regulations that support solution transition, operation and maintenance
- **ORGANIZATION**
  - Managerial roles and responsibilities and management effectiveness; governance including ensuring partner alignment with the approved strategy and solution

**THREE POTENTIAL READINESS SCENARIOS:**

A. The Political, Economic and Social Context and Integrated Solution Elements support consistent achievement of the targeted level of impact or gains from the solution

B. The Context is favorable, but one or more elements of the Integrated Solution are missing so there are risks in transitioning a solution to government. Risks mean a high probability of reduced impact vs potential and/or high probability of inconsistent achievement of impact

C. The Context does not support a viable transition to government
