

Update to Request for Proposal:

Long-Range Unmanned Aerial Vehicle / Drone Demonstration Flights for Polio and COVID-19 Lab Sample and Vaccine Transport in Central African Republic

In response to applicant queries and current events in Central African Republic, the following updates have been made to this RFP:

- The final submission deadline is extended to 24 September 2021.
- The first phase of this project will take place at the Malawi Drone Corridor, or comparable location, circa December 2021.
- VillageReach will select up to two qualified applicants to demonstrate their technology and compete for a Phase 2 'routine delivery' contract in CAR.
- We invite drone companies to apply who do not yet have the capability of going 300km nonstop, as long as they are committed to reaching this target by April 2022 and submit their roadmap to do so with their application. If otherwise qualified and selected, any such applicant may demo their longest-range drone in Malawi.
